Hettstättler Silber u. Kupfer-Werke, near Dreaden

1. Produces copper blocks up to 120 hundredweights, the destination of which is not known to the workers. Aside from these blocks, copper plates are being rolled. From the scrap, guiding rings for large caliber shells are thought to be produced. The plant is a Russian enterprise. It had 4200 workers at the end of August 1946.

Grupp-Werke (Werrawerk), Wernhausen an der Werra

Belongs to the Sowjetische Metallgieß A. G., in Berlin-Weissensee. The present General Director is a Russian, Kimian. The personnel numbers 1000 men. The plant is being greatly enlarged. Hard metal is being produced, especially Widia (from "Wie Diamant" or "like diamond") in plate form. These thin plates are then soldered on ordinary types of steel in order to make high grade tools. At present three to four tons are produced monthly. After the completion of the new buildings, it is expected that eight tons monthly will be produced. Aside from Widia, mining implements and chisels are being made. The products are used in reparations payments. A very small percentage of the production is turned over to German firms which work for the Russians.

A later report, dated 20 October 1946, states that the firm's monthly production is around five to eight tons; all production goes to Russia for reparations; personnel numbers 500 men; the management is Russian and the General Director is named Orakinian. It further states that a move to larger quarters in Immelborn near Eisenach was supposed to take place on 1 December 1946.

Gebrüder Heller, Schmalkalden

Produces riveting-tools for airplanes, drills for gun-barrels, and drills with Widia points. Has 400 workers.

Fabrik Dillinger (sic) Niederschmalkalden

Produces hoisting apparatus, bridge constructions, and heating appliances. Has 450 workers.

Metallgussgesellschaft GmbH, Böhla-Ehrenberg

Foundry, principally for pistons and pistons, etc. Under Russian management. Personnel numbers 1000. All production goes to Russia.
